

**We are going to introduce our new generation of rollermill purifier and separator ;**

### **THE NEW ROLLERMILL**

**Our new generation of rollermill has a lot of difference than standards model of rollermills  
Such as strongest body comparing with all other rollermills in all over the world.**

**Roll adjustment hand wheels are protected by special covers not to let everybody to touch  
and change the adjusted machine**

**Roll changing connection part to the body of rollermill very practical and very useful for  
easy work,**

**New design of feeding roll gate and long life using after one adjustment**

**Bearing temperature indicator and warning system**

**Rollermill roll distance electronical adjustment system**

**Inner sucked pneumatic lifting system**

**Stainless steel application where it gets in to touch with product**

### **NEW PURIFIER**

**New developed purifier has largest sifting area than others , with a very practical solution  
brushes has very successful running and inside aspiration has very good result.**

**New generation vibro motor by an Italian company let the machine work much better,  
new vibro motor has less maintenance and long life operation**

### **NEW SEPARATOR**

**New generation separator, is the most important point before milling section incase you are  
working with dirty wheat separation must be very sensitively before going to be milled**

**New separator has three different separation step ; first upper inlet of machine has three  
layers of passing of wheat and this help to the wheat easily cleaned then wheat goes to the  
enterence sieve of seperator and then there is more to decks of sieve from the middle point  
of sifting there is another aspiration cleaning and this helps to aspirate the wheat during  
separation.**
