# **The Brabender® GlutoPeak**

## **A new type of dough rheology**

Dipl.- Ing.(FH) Markus Löns

Brabender® GmbH & Co.KG Duisburg – Germany

**...where quality is measured.**

# The Brabender® GlutoPeak

## A new type of dough rheology

Farmer – Miller – Baker

Everyone is looking for an  
optimal grain, flour and bread **quality**

---

...where quality is measured.

**Brabender®**

# The Brabender® GlutoPeak

## A new type of dough rheology

### **Influence to obtain an optimal baking product (e.g.)**

- **Quality of raw materials**
- Recipe
- Technological process parameters
- Baking process
- Customer demands
- ...

---

...where quality is measured.

**Brabender®**

# The Brabender® GlutoPeak

## A new type of dough rheology

### Criteria of raw materials

- Composition (protein, moisture, ash, fat,...)
- Properties of the ingredients
- Final: Quality of flour
- Technological processing properties
- ...

⇒ International standards have been developed, are well defined and used worldwide over decades.

---

...where quality is measured.

**Brabender®**

# The Brabender® GlutoPeak

## A new type of dough rheology

### What happened if something went wrong?

- Less or bad quality of products

- Inefficient production: means
  - ✓ low rate of output
  - ✓ demotivation of employees
  - ✓ unnecessary production cost

...where quality is measured.

# The Brabender® GlutoPeak

## A new type of dough rheology

### What happened if something went wrong?

- Additional cost for disposal of rejected products

- Increasing time pressure at agreed product delivery
- Most important: **your customers get unhappy**

---

...where quality is measured.

**Brabender®**

### How to check the quality of grain and flour?

- Absolute values (e.g. moisture, protein,...)
- Rheological values (water absorption, dough stability, extensibility,...)
- Quick methods (e.g. NIR, Falling Number,...)
- Practical methods (e.g. Brabender® 3-Phase-System)
- ...

# The Brabender® 3-Phase-System

## Rheology from dough mixing to the oven

...where quality is measured.

**Brabender®**

# The Brabender® 3-Phase-System

## Rheology from dough mixing to the oven

### Phase 1: Dough mixing

**Key question: Water absorbtion and how stable is the dough during mixing?**

- Water absorbtion
- Protein quality
- Enzyme activity (Proteases)
- Mixing stability

**Farinograph®-AT**

AACC standard 54.-21, ICC standard 115/1, ISO 5530-1, 5530-2, ...

...where quality is measured.

**Brabender®**

# The Brabender® 3-Phase-System

## Rheology from dough mixing to the oven

### Phase 2: Dough resting and stretching

**Key question: Can the dough hold gas?**

- Stretching behavior of the dough
- Effect of enzymes, micro organismen, ... during the fermentation
- Baking characteristics

**Extensograph®-E**

AACC standard 54-10, ICC standard 114, ISO 5530-2, ...

...where quality is measured.

**Brabender®**

# The Brabender® 3-Phase-System

## Rheology from dough mixing to the oven

### Phase 3: Gelling of starch

**Key question: Can the starch absorb the water during baking?**

- Enzyme activity (Amylases)
- Gelling behaviour of starch
- „Video“ of starch gelling, not just picture

**Amylograph®-E**

AACC standard 22-10, ICC standard 126/1, ISO...

...where quality is measured.

**Brabender®**

## Brabender® GlutoPeak (GP)

- A new rapid method
- In addition to the Brabender® 3-Phase-System
- Rheological „fingerprint“ of flour after minutes
- Additional info for additional benefit

## The Brabender® GlutoPeak

- Measures flour, wholemeal flour, vital gluten and baking mixes
- Special application for wafer flour
- High correlation to protein content and baking volume
- Small sample size (3-10 g)
- Results within some minutes (1-10 min.)
- Easy handling

### The principle

- Preparing of a slurry with test material and water
- Gluten will be separated by the mixing and aggregates
- The temperature and speed are kept constant
- After a time (dependent upon the property of the sample), the gluten aggregates
- Further mixing destroys the network, the torque decrease

## The principle

- Most important are
  - the peak time and
  - the maximum height of the curve
- Strong gluten: short peak times with high peaks
- Weak gluten: long peak times with low or even no peaks
- The peak time range is between 60 and 600 s (1-10 min).
- The flours can be rated due to their different peak maximum times and peak heights.

# The Brabender® GlutoPeak

New instrument – new method

**NEW**

Results by

- Evaluation software
- Correlation software

...where quality is measured.

**Brabender®**

## Description of the results

## Classification

- **Strong flour (bread)**
  - ✓ short RT
  - ✓ high PV
- **Weak flour (biscuit)**
  - ✓ long RT
  - ✓ low PV
- **Wafer flour**
  - ✓ very long RT
  - ✓ very low or no PV

...where quality is measured.

### Description of the evaluation

**Retention time (RT)** (Peak maximum time)

- Time required for gluten to aggregate and exhibit maximum torque on the paddle before breaking down

**Peak value (PV)**

- Maximum torque in BU (Brabender® Units)

High peak: High content of strong gluten

Low or no peak: Low content of gluten

## Some results from scientific research

Flour	8 g
Water	9 mL
NaCl	16 g/L
Speed	2750 rpm
Temperature	36 °C

...where quality is measured.

**Brabender®**

## Summary

- Flour can be well defined by the Brabender® 3-Phase-System
- Additional rapid method GlutoPeak for the first „quality finger print“
- Constant and good flour quality reduces additional cost and waste in bakeries
- Optimizations of technological processes are possible
- Optimum and constant baking quality can be achieved

## **Benefit for Milling industry**

- Constant and better flour quality
- Higher flour price possible
- Customer loyalty through quality

## **Baking industry**

- Preventing adverse production batches
- Higher market share
- More baked goods by choosing better flours
- Customer loyalty through consistent product quality

---

...where quality is measured.

### ***Conclusions (by Dr. Peter Köhler\*<sup>1/2</sup>)***

The GPT is a new, relative **fast method** for the characterization of the technological quality of wheat flours. The results are **highly correlated** to the **protein** content and the **bread volume**. Concerning the rheological properties the maximum torque is more correlated to the data obtained for dough than obtained for gluten. Nevertheless it has to be considered that some wheat cultivars with poor baking qualities do not fit to these correlations.
